DETAILED ACTION

Priority

The examiner received a call requesting a review of the applicant's foreign priority. Applicant's claim for the benefit of a foreign priority is accepted. The examiner has determined that a request for foreign priority was filed in timely fashion along with a foreign priority document. Therefore, the examiner is filing a supplemental allowance.

Response to Amendment

The examiner acknowledges amendments after a final rejection dated 2/1/2007. The amendments are accepted as proper in that they place the application in the condition for allowance. With the amendments cancelled claim 30 is incorporated into allowable claim 31; and cancelled claim 32 is incorporated into claim 33. With the amendments claims 1-13, 15, 16, 18-22, 25-29, 31 and 33-35 are pending, and are all presently found to be allowable.

Allowable Subject Matter

Claims 1-13, 15-16, 18-22, 25-29, 31, 33 to 35 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

The reasons for the allowability of claims 1-13, 15-16, 18-22, 25-29 34-35 were made of record in previous office actions.

Regarding claim 1, an additional explanation is added regarding indented limitation 3. The phrase "counting window having an arbitrary duration" is taken to mean that the window duration is changeable by the method to respond to conditions

Art Unit: 2837

that may be arbitrary, e.g. noise. The applicant provides support for this interpretation on page 4, line 19 to page 5, line 20 and illustrated by figures 4-6.

Claim 31 is allowable for the indented steps of the method, but especially the steps:

- using a bi-directional counter to count a difference in residence time of logic states '0' and '1' at an output of said detection circuitry during counting windows;

- varying a counting frequency of the counter during various driving phases of the motor.

Claim 33 is allowable for all the indented steps, but especially the steps in combination:

- using a bi-directional counter to count a difference in residence time of the logic states '0' and '1' at an output of said detection circuitry during each of a succession of counting windows;

- using a value assumed by the counter at an end of each counting window in formulas to estimate an instantaneous portion of the rotor a period between two zero-crossings;

- estimating a zero crossing based on previously determined zero crossings; and

- establishing a counting window such that the estimated zero crossing is at a midpoint of the counting window.

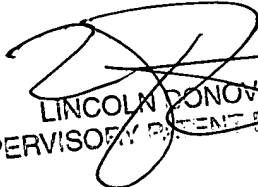

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert W. Horn whose telephone number is 571-272-8591. The examiner can normally be reached on Monday-Friday 7:00-3:30 EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lincoln D. Donovan can be reached on 571-272-8591. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
